

Dinion^{XF} Day/Night Camera Series – See the 15-bit difference!

Security Systems

When you're looking for a CCTV camera, you need performance, reliability and convenience. Get it all with Bosch's Dinion^{XF}. The proof is in the output – 15-bit technology enhanced by XF-Dynamic, programmable backlight compensation, default shutter and high sensitivity combine to produce images that are crisp, clear and deliver the detail you need to manage your security.

Security you can rely on.

BOSCH

Dinion^{XF} – the high-performance, smart surveillance camera

- 15-bit DSP technology – providing the highest picture quality available
- XF-Dynamic – uses 15-bit technology to extend the dynamic range, maximizing image quality
- 24/7 coverage – ideal for use day and night, around the clock, guaranteed perfect performance
- Highest sensitivity in all lighting conditions – SensUp frame integration enhances sensitivity up to 10x while relying on ambient moonlight
- Default shutter – eliminates motion blur and maintains camera sensitivity
- Programmable backlight compensation – optimizes the area of interest
- Bilinx – control, configure and update over the video cable

Dinion^{XF} – the flagship of the Dinion family

The Dinion series from Bosch provides a full range of cameras – from mid-range to high-performance – to meet the most challenging situations. All of the models in the Dinion family share the same unique design, superlative picture quality and ease of installation. Plus, all of the models are built around the same DSP chip technology that makes these cameras perform so well.

The Dinion^{XF} series is the flagship of the range, and achieves unsurpassed picture performance under even the most difficult light and scene conditions through unique and innovative 15-bit digital video processing. The Dinion^{XF} features XF-Dynamic, which reveals details that other cameras miss in ultra high-contrast scenes. The camera's many other new image-enhancement features ensure the very best camera performance straight from the box. The Dinion^{XF} is the natural choice for advanced professional surveillance systems.

▲ Identify passengers at the station with clear, detailed images

▲ Monitor shoppers in a mall

15-bit DSP CCTV camera for superb image generation

Thanks to its processing power, the Dinion^{XF} camera can process an image with 15-bit accuracy, where most digital CCTV cameras use 10-bit processing or less. Dinion^{XF} can give you an image that is 32 times better than standard 10-bit cameras. This provides images which are more vivid and true-to-life than any other CCTV camera. You'll see details like you've never seen before, including faces, license plate numbers and more that help you provide better, more efficient security. Until the Dinion^{XF}, this was only possible with expensive, professional broadcast cameras. Bosch proudly brings this technology to you, smart and affordable.

XF-Dynamic for the ultimate image quality

XF-Dynamic is built on 15-bit processing technology, which extends the dynamic range, maximizing image quality. The unmatched accuracy of the detected CCD signal enables the camera's Digital Signal Processing to display images that reveal details in both the dark and highlighted areas of the scene simultaneously. XF-dynamic can be used with all lens types, including manual iris lenses. Unlike most other cameras, XF-dynamic works with SensUp (frame integration) and the Dinion^{XF} Day/Night camera using IR illumination.

A In an airport, capture all the necessary details including faces, baggage and more

Ideal for use day and night, around the clock

The Dinion^{XF} Day/Night camera is ideally suited for around-the-clock security applications.

- Highest picture quality available – see more details with better clarity than ever before
- Guaranteed performance around the clock – day and night
- Works in almost any lighting – no need to install expensive extra lighting
- Evidence you can use – infrared technology provides better images than you get with visible light
- View images in low lighting – peer through darkened areas to watch for suspicious activity or potential threats

High sensitivity gives you amazing clarity

▲ Standard camera < 0.5 lux

▲ Dinion^{XF} < 0.5 lux

Traditional CCTV cameras lose color picture quality when the lighting level drops – when the sun goes down or you turn off the lights at the end of the day. Yet, Dinion^{XF} can continue to deliver first-class color images. The elevated sensitivity in the Dinion^{XF} enhances the contrast in low-light images, and boosts color clarity. Dinion^{XF} makes it perfectly clear which camera is the best for you.

Sharper images, whatever the lighting

Dinion^{XF} can handle low light, shadows, and give you unmatched detail. What about scenes that have light – just in the wrong place?

With our programmable backlight compensation feature, Dinion^{XF} ensures you get the best possible images, even in strongly backlit applications. So you can set an inside camera to watch the front entrance, or place a camera behind a cash register and not have to worry about losing details.

Dinion^{XF} takes the hassle out of CCTV – you get clear, sharp images no matter what lighting you're dealing with.

▲ Standard camera

▲ Dinion^{XF} with backlight compensation

Capture runaway details

▲ Normal camera shutter speed

▲ Normal camera – shutter fixed at 1/500s

▲ Dinion^{XF} – Default shutter at 1/500s provides clear details

▲ Dinion^{XF} – Default shutter at 1/500s captures highway movement even in low light

Some details are just hard to capture. Moving targets, such as license plates, are challenges that most cameras can't meet.

Not Dinion^{XF}. We designed our default shutter that combines the advantages of a faster shutter to capture movement with those of a standard shutter to grab detail and sensitivity. The result?

No blurring – every digitally recorded image is crisp and clear. No more guessing what car just whizzed by or who dashed out the door – you'll have all the detail you need to know for sure!

So easy to install and operate

Dinion^{XF} is one of the easiest high performance cameras to install, configure, and operate. Three independent modes are pre-programmed. Dinion^{XF} operates perfectly – straight from the box. Auto-Lens detection and the Lens Wizard ensure accurate set-up and focusing of the lens – the first time.

▶ For exceptional situations where fine-tuning or special settings are required, the configuration of the camera can be fine tuned. Control buttons on the side of the camera and the menu-driven On Screen Display (OSD) provide direct access to all settings.

▼ Bilinx Bi-Directional Communication Technology – The smartest way to reach your camera.

Changes made to camera setup can be seen immediately.

Remote programming – the convenience of Bilinx

Sometimes you need a camera installed in places that are just hard to get to. Dinion^{XF} has the solution – Bilinx, the newest innovation in CCTV technology from Bosch.

Bilinx allows your technician to check status, change camera settings and even update firmware without having to physically access the camera. You can place a camera on the roof or in a high corner of the ceiling and they don't have to worry about climbing back up to it to make adjustments. You'll save on installation and service time. You can also stay in touch with you camera through Bilinx. With this technology, your camera can transmit alarm and status messages, so you know if a situation arises that needs to be addressed. A Dinion^{XF} with Bilinx gives you freedom, convenience and peace of mind.

Updates are made through the video cable using the Bilinx Configuration Tool.

No need to climb back up the ladder to make adjustments.
