# Realise the Home of Tomorrow .... Today

You can automate your home based on a technology called X-10. This technology uses electrical wiring as a path for communication. Different devices talk to each other through the electrical wiring which is already in your home. Simply plug-in or wire an X-10 compatible device into your electricity supply and it can communicate with any other X-10 device in your house.
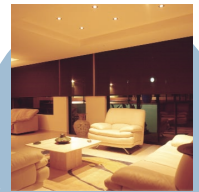

Shut down the house and set the alarm with one key press

Automatic lights at night

Getting dark? Your house adapts to evening-mode automatically

Mood lighting

Telephone control Turn on your airconditioner before you get home

Wireless Remote to control TV or automation

Wireless wall switch no extra wiring required

Key Chain Remote Turn on light and music before entering your home

While X-10 is the ideal solution for existing homes (because it negates the need for additional wiring throughout your house), it can be used in both newly constructed and established homes as a low-cost solution to home automation.

Hills

A division of Hills Industries Ltd
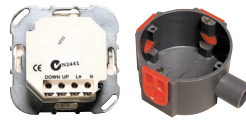

X-10 Home Automation Starter Kits

Home Theatre Kit

Remote

Transceiver Module

Wall Dimmer & Back Box

Curtain Controller

Entertainment made easy...

Gather your friends for a night's entertainment. Dim the lights, close the curtains, turn on the TV and start the VCR or DVD - all from one remote control.

Sensor Light Kit

Hawk Eye Motion Detector

Transceiver Module

Socket Rocket

Light a pathway...

Never have to fumble for a light switch or keys in the dark again. Light a path through your hallway to the bathroom, or at your front door when you come home at night

Security Lighting Kit

NX LCD Code Pad

Two Way PLC Interface

DIN-rail Switches

Your safety first...

When your security alarm or fire alarm is triggered, have your interior and exterior lighting turn on for a visual indication of a trouble condition in your home.
