Multi-room video distribution

Multi-room stereo distribution

Whole-house Internet and home networking

Home automation

# Everything you need to integrate your life with your home.

The warmest memories in life are often those created in the home. Backyard barbeques, visiting with friends and family, birthdays and anniversaries—these are the memories that we all cherish.

With so much of our lives spent in our homes, it's no wonder that today's families desire the technologies that effectively combine lifestyle and leisure with modern amenities such as whole-house security, home automation, and multi-room Internet, video and stereo networking. Concourse by DSC addresses this need by organizing and distributing these technologies throughout your home, giving you everything you need to protect your family, automate household functions and enjoy the comforts of home like never before.

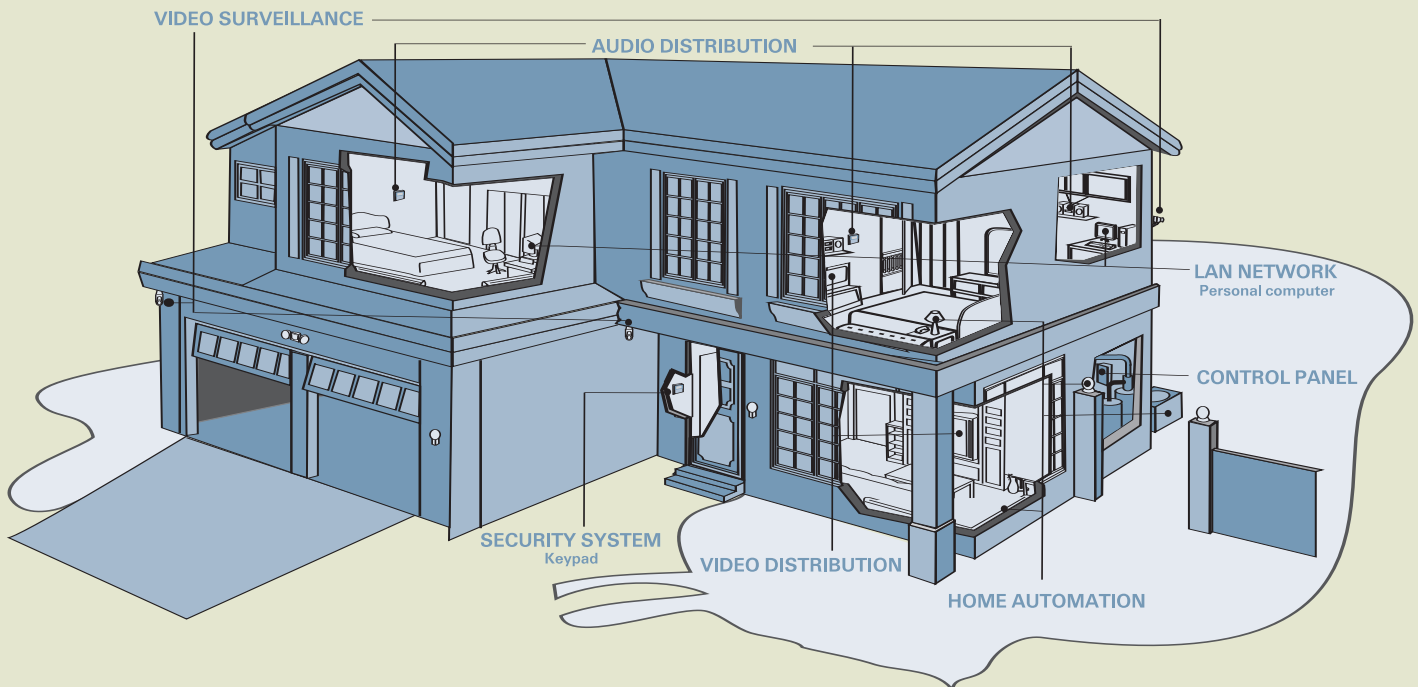

Because Concourse is a structured wiring system that houses application modules of various purposes within a central source, you're given greater control and management of everyday services such as telephone and cable/digital television. Other exciting opportunities, such as in-home computer networking, will make work and play easier than ever.

Concourse is ideal for small entry-level to luxury custom home installations and will add immediate value to your life—and should you ever decide to sell—resale value to your home.

Networking and structured wiring are among the fastest growing amenities in homebuilding, and increasingly, a common upgrade in older homes. See how Concourse structured cabling systems and application modules will increase the enjoyment of your home through the integration of a number of lifestyle enhancements.

## Get the most for your home with Concourse by DSC

# Concourse provides comprehensive security for your home.

To be considered comprehensive, a security system needs to protect you wherever you may be inside your home. Concourse readies your security system for the unexpected by centralizing and routing security to every corner of your home, blanketing it in protection and giving you the peace of mind that comes from knowing your family and possessions are secure.

DSC security system modules can protect your home in a number of ways. Visual verification modules\* allow you to see what you've been missing through video surveillance. Keep an eye on your children as they return from school and enter your home through e-mailed open/close video reports to your work computer, laptop or PDA. Provide central monitoring station operators and yourself with video images before and after alarm activation; this way you can be sure if your home was entered by an intruder and operators can verify the alarm before acting on it.

Upon transmission of an alarm signal, DSC audio verification modules\*\* provide you and your family with two-way, talk/listen-in functionality with a central monitoring station operator through a combination of microphones and speakers installed in your home. DSC Internet alarm communicators\*\* use the latest digital networking technologies to provide flexibility and an always-on, two-way line of communication between your control panel and central station receivers. DSC security system modules also include cellular-based transceivers that provide an affordable wireless alarm communication\*\* alternative to phone lines, protecting against accidental line cuts caused by storms, construction or deliberate tampering by an intruder.

# Make any room a home entertainment center with Concourse multi-room video distribution.

Direct cable/digital and satellite service to any room of your home with Concourse video distribution modules. You'll be able to connect as many televisions as you like to satellite receivers, DVDs, VCRs and programming sources such as Digital TV or HDTV. Concourse allows you to assemble as many entertainment centers as you wish as the system can easily accommodate necessary bandwidth requirements. If your family enjoys video games, Concourse lets you link computers or game consoles for home-wide video game tournaments.

\*Requires an account with an OzVision-compatible central monitoring station

\*\*Requires an account with an authorized central monitoring station

## Make your home sing with Concourse multi-room stereo distribution.

Do you enjoy music? With Concourse multi-room audio distribution components you can connect to speakers located throughout your home to bring music to any room you want, not just the room where your stereo unit is located.

## Explore the many corners of the Internet from any corner of your home with Concourse.

The Internet has quickly entered the lives of many families to become a vital source of information, entertainment and a valuable work-related resource. With Concourse you'll be able to direct Internet access to your study or home office, to the bedrooms or the family room—the choice is yours. With whole-house Internet access, you can be planning your next summer vacation online, while others download their favorite music or research their next school project.

Concourse home networking makes any home office run with efficiency with the introduction of high-speed\* Internet access and multiple telephone and fax lines to any location in your home. Moving your home office is no problem since transferring all of these services simply means plugging them into the wall outlet of another room. Concourse home networking also makes it easier to share peripherals such as printers and scanners.

## Manage your lifestyle with home automation modules.

Control your lighting and heating automatically with DSC home automation modules. These modules allow you to program your lights to automatically turn on and off according to a schedule defined by you. You can create daily, weekend or monthly schedules. With the press of a button, individual lights can be controlled from any room in your home. In emergencies, lights can be programmed to come on automatically to help guide you to safety. Your furnace can similarly be controlled to automatically turn on or off heating according to a schedule.

Concourse home automation modules also allow you to turn any touchtone phone into a fully functional keypad that can be used to monitor and control your security at home or from anywhere in the world.

\*Requires high-speed Internet account with an Internet service provider

# What's inside?

With our connections, anything is possible in home networking and structured cabling. DSC offers two proven solutions; both are designed to equip your home with the amenities and flexibility that best meets your needs.

For those looking for a cost-effective solution, nothing beats ConcourseEXP. It's organized, simple and provides the flexibility you need to expand services as you like.

ConcoursePRO is our premium home networking and structured cabling offering. It's ideal for custom homes and other applications where extensive wiring is needed.

It's all here. Everything you need to enjoy your home like never before.
