BOSCH

VR8 – Desktop Alarm System

Just plug and place

The VR8 is a desktop or wall mounted control panel for rapid installation in residential or office environments. The aesthetically pleasing unit has been designed to fit in with most modern interior design whilst offering a high level of security.

Using advanced wireless technology each element of the system can be installed or removed simply and quickly, without the need to run unsightly cables or conduits.

Arming and disarming can be undertaken from anywhere in the property using the remote keypads or key fobs.

User control

Two STAY and one AWAY modes are available via the VR8 control panel.

STAY 1 is programmed by the installer during installation; STAY mode 2 is programmed by the master card holders, ensuring total user control.

AWAY mode allows the user to arm all zones when leaving the premises. The STAY mode arms the perimeter zones whilst allowing movement within the interior of the building.

Flexibility

The VR8 system includes various accessories.

For those who may prefer the option of not having to remember the access code, there are hand held radio key fobs.

A range of hardwired keypads are offered that include backlit LED (text) displays making operation simple for any application.

Matching your needs

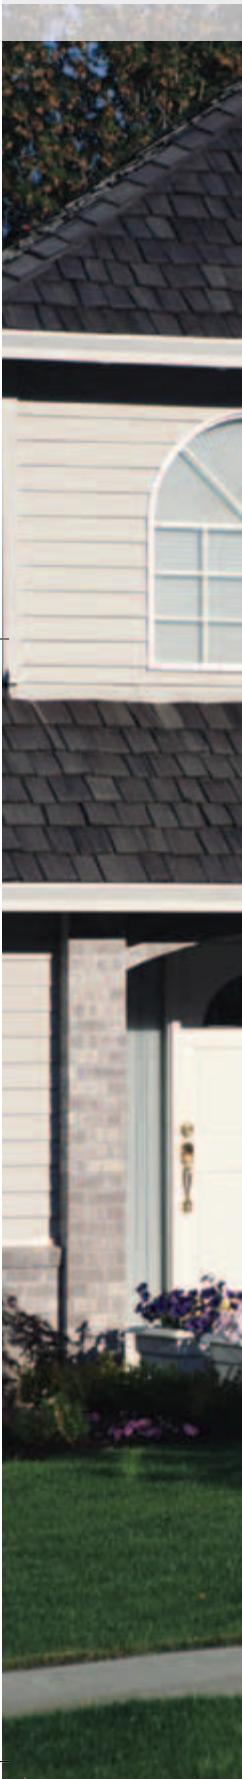

All of the components of the VR8 system have been designed to fit into a modern home or office environment.

A range of options

To ensure that individual users get the most out of their system there is a range of accessories that can be specified.

Accessories are wireless compatible with the desktop control unit allowing expansion to be added at a later date.
